## DISCUSSION

The Carpenter Technology site is a former stainless steel tube manufacturing facility that ceased operation in 1983. The facility used acids to pickle metals. The wastes from the operations were stored on-site for less than 90 days. Several tanks still exist at the facility and all are in good condition. The state approved clean closure of some of the tanks. There is no evidence of a release of hazardous substances; furthermore, the facility is surrounded by a chain link/barbed wire fence. Ground water is not used within 3 miles of the facility. Surface water must travel over 1.5 miles before reaching the nearest perennial stream.

Due to the lack of a release of hazardous waste and distance to potential receptors, the Carpenter Technology site does not meet the minimum criteria of a viable candidate for inclusion on the Superfund National Priorities List; therefore, the site is designated a disposition of No Further Remedial Action Planned (NFRAP), and at this time does not warrant further investigation under Superfund.

This site is being referred to the State of Texas for any appropriate action under the state's regulations.

## APPROVALS

Disposition Recommended by: Lon Biasco  
(Site Assessment Manager)

Signature: \_\_\_\_\_

Date: 11/6/95

Disposition Recommended by: Ragan Broyles  
(Section Chief)
